

GUIDE

**For students of Master's degree programs in Postgraduate School of Law
MAQSUT NARIKBAYEV UNIVERSITY**

2024

This Guide includes general requirements for the study and preparation of master's theses and projects of students of postgraduate programs of the MAQSUT NARIKBAYEV UNIVERSITY High School of Law, as well as certain aspects of extracurricular workload.

Approved by the Decision of the Academic and Research Council (Protocol No. 164 dated March 4, 2024)

Recommended by the Committee on Science of the MAQSUT NARIKBAYEV UNIVERSITY High School of Law, Protocol No. 13 of February 28, 2024

Developed by PhD, Adjunct Assistant Professor, Chairman of the Science Committee of the Higher School of Law Abylayuli A., PhD, Teaching Professor Lozova O.V., and LL.M., Teaching Professor Babajanyan E.L.

This document may not be reproduced in whole or in part, replicated and distributed without the permission of the Chairman of the Board of MAQSUT NARIKBAYEV UNIVERSITY.

Chapter 1 **Scope of application**

This Guide sets out the requirements for the learning process and the conduct of research work of a postgraduate student in scientific, pedagogical and specialized areas and is applied by University departments responsible for the educational process within the framework of master's degree programs.

Chapter 2 **General provisions**

MAQSUT NARIKBAYEV UNIVERSITY (hereinafter - MNU) postgraduate studies at the Higher School of Law (hereinafter - HSL) are based on the following principles:

- research of the latest areas of legal science developed with the participation of exclusive MNU employer partners;
- attracting the best teachers (including practitioners);
- application of a new approach to the formation of masters in law;
- compliance with the principles of academic integrity; •development of a unique program with a moderate classroom load;
- ensuring communication with the practice of law enforcement and obtaining the most up - to - date information on legal issues; •
- integration of scientific research into the educational process;
- ensuring maximum creative freedom of research.

Chapter 3 **Requirements and admission procedure**

The admission procedure for persons to Master's degree programs is governed by the Admission Rules approved by the MNU Academic and Research Council, as well as the MNU Academic Policy.

Chapter 4 **Learning trajectories in the chosen areas**

Training in scientific, pedagogical and specialized areas of the master's degree includes theoretical training, practical training (research, pedagogical, industrial), writing a dissertation (project).

<i>Scientific and pedagogical direction</i>	
Theoretical education (including internships and internships)	84 ECTS
RWGS (research work of a postgraduate student)	24 ECTS
Final certification	12 ECTS
<i>The total number of credits: 120 ECTS</i>	

Profile direction	
Theoretical education	35 ECTS
ERWS (experimental research work of a postgraduate student)	13 ECTS
Final certification	12 ECTS
The total number of credits:	
	60 ECTS

Chapter 5

Master's thesis and Master's project

The main purpose of studying for a master's degree is to prepare a dissertation research.

postgraduate of the scientific and pedagogical direction prepare a master's thesis. The dissertation is a scientific work aimed at solving an urgent scientific problem determined by the relevant Scientific School (hereinafter referred to as the SS), reflects the skills of independent scientific research and should address practical problems.

postgraduate of the profile direction prepare a dissertation project. The project is aimed at solving an existing practical problem, determined by the relevant SS, reflects the ability of the postgraduate to apply practical skills and can be closely related to the professional field of the undergraduate, the place of practice or commissioned by interested parties.

The research work is carried out under the direct supervision of a scientific supervisor from among the teachers of the relevant Department, assigned by the SS to each postgraduate student. The research topic is set by the SS. The responsibility for establishing contact with the supervisor and for the conscientious use of the right to receive consultations lies with the postgraduate student. All research topics correspond to the topic of the Research Report, which is developed by the SS, based on current problems and trends in the development of a particular branch of law.

Postgraduate who are members of the University's team to participate in recognized international gaming trials on the basis of the presentation of the head of the program, in agreement with the Science Committee, as a master's thesis (project), the work can be considered as part of participation in the project / competition can be counted.

Chapter 6

The procedure for assigning the research topic

The procedure for assigning a master's student to the SS is administered by the Deputy Dean of the HSL for Postgraduate studies, the procedure for choosing a research topic is administered by the tutor-manager for postgraduate studies at the HSL

Highly qualified persons from among the faculty of MNU can be represented as scientific supervisors of master's theses (projects). A postgraduate student may be assigned 2 scientific supervisors. A person who is included in the list of undesirable leaders by the Committee on Science of the Higher School of Law or by order of the Dean, as well as who does not speak the language in which the master's thesis (project) is supposed to be performed, cannot be appointed a scientific supervisor.

Each school prepares a Research Report at the end of each academic year. This report(s) is a holistic study on a specific topic. The Research Report for the master's degree of the profile direction and postgraduate students is formed within one academic year, the Research Report for students of the scientific and pedagogical direction is formed within two years. A single Research Report may contain several research topics, provided there are a sufficient number of postgraduate and undergraduate students being assigned.

Topics in different languages may not be duplicated. The subject of the Research Report is approved by the Science Committee of the Higher School of Law. It is allowed to publish the interim results of the study with a logical conclusion in the next academic period. Each Research Report is assigned a supervisor who oversees the work on the report, as well as forms the final text of the document.

Research Report topics are presented to students no later than October 1. After the presentation of the topics, postgraduate are determined with the choice of a higher school for conducting research and assigned to the appropriate school. After the formation of a contingent of postgraduate and students involved in the preparation of the Research Report, the SS develops the content of the relevant report with the distribution of specific issues and topics between postgraduate and students. A supervisor is appointed for each postgraduate or student.

As part of the research, postgraduate prepare an independent dissertation /project, going through all stages of defense, but the work should be focused as much as possible on making a significant contribution to the preparation of the Research Report.

The tutor-manager forms an idea about the approval of topics and scientific supervisors of dissertations (projects) and submits them for approval to the Science Committee of the Higher School of Law and the Academic and Research Council of the University. The order on the approval of topics and scientific supervisors of dissertations (projects) is issued until October 31 of the current year.

Chapter 7

Organization of practice and internship

7.1. Internships

Internships are mandatory for postgraduate of specialized and scientific-pedagogical fields. The internship is one of the credits mastered under the program. The purpose of the internship is to obtain the practical skills of a postgraduate student according to the training program. postgraduate are sent for an internship at the organization in accordance with the training program.

The postgraduate fills out the internship journal. During the internship, the postgraduate studies the activities of the internship organization, performs the tasks of the internship supervisor, and gets acquainted with the relevant regulatory framework. Internship assignments are exclusively practical in nature and form the professional qualities and skills of a postgraduate student. Based on the results of the assignments, the postgraduate must form an idea of the trends in the development of the branch of law, prospects and main problems.

Upon completion of the internship, reports are defended. The recommended report size is 7-10 sheets, Arial font, 12, line spacing - 1.

The report contains:

- description of the types of work and tasks performed by the postgraduate during the internship;
- analysis of general trends in the work and development of the relevant branch of law;
- a description of the head from the internship organization;
- an application in the form of an internship journal.

The protection of reports is carried out in a commission consisting of employees of the Office of Practice, Career and Employment, as well as the teaching staff of the Higher School of Law. The score is set by calculating the arithmetic mean of all the ratings of the commission members. The grades are announced to the postgraduate upon completion of hearing the reports of the current day.

Criteria for evaluating the protection of the internship report:

- the postgraduate student demonstrates the study of relevant areas of development of the professional environment according to the training program - 20%;

- the postgraduate demonstrates the acquisition of professional practical skills based on the results of the internship - 40%;
- the postgraduate student demonstrates the vision of the functioning and tasks of the internship organization - 20%;
- the report of the postgraduate is logically structured, contains a description of the content of the internship and the results of its passage, the design of the report meets the requirements (font, margins, spacing, links to used sources) - 20%

7.2. Pedagogical practice of postgraduates

Postgraduates of the scientific and pedagogical direction undergo pedagogical practice for 4 weeks (45 hours), of which 3 hours are active.¹ The remaining hours include: the postgraduate attending classes of the HSL teachers; participation in academic events of the HSL; fulfilling assignments from the head of the practice and/or the head of the educational program; developing a project for your own **class** in Canvas²; verification of control activities of students. All types of work are recorded by the postgraduate in the journal and are confirmed by the signature of the teacher, the head of the practice and / or the head of the educational program.

To defend the practice, postgraduates provide an internship report with an application of the practice journal, a description from the head of the practice, and also demonstrates a model lesson.³ The report contains a description of the tasks of pedagogical practice, a description of the classes attended with an analysis of the studied teaching methods, a description of the active hours spent with accompanying analysis. The recommended report size is 4-6 pages, Arial font, 14, line spacing - 1.

The protection of reports is carried out in a commission consisting of employees of the Office of Practice, Career and Employment, as well as the teaching staff of the Higher School of Law. The score is set by calculating the arithmetic mean of all the ratings of the commission members. The grades are announced to the postgraduates upon completion of hearing the reports of the current day.

Criteria for evaluating the teaching practice of postgraduates:

- the postgraduate student demonstrates an understanding of the logical structure of the lesson - 20%
- the postgraduate student demonstrates the ability to apply 2 or more methods of conducting classes - 30%
- the report of the postgraduate is logically structured and contains an analysis of the teaching methods of two or more teachers, as well as a critical analysis of the classes attended - 30%
- the postgraduate demonstrates self-reflection skills regarding the active hours spent during the writing of the report and answering questions during the defense - 20%
- the postgraduate presents the materials logically, with the purity of speech and the use of professional terminology - 10%.

-
1. Classes can be conducted as a teaching assistant, binary or independently. The result of the pedagogical practice will be the presentation of the lesson developed by the postgraduate, as well as a report on the lessons conducted.
 2. Course design, loading of materials, including presentations, control tasks, assessment criteria, syllabus project, etc.
 3. The main requirements for the presentation of the lesson model: -the duration of the presentation is 10 minutes; the lesson should contain a presentation of the material, a description of methods of interactive interaction with the audience; a control event is being developed on the topic of the presented lesson with the establishment of evaluation criteria; the content of the lesson itself, its plan, useful materials, control event, etc. should be uploaded to the Canvas of the postgraduate (only one lesson within one Module); the subject and content of the lesson should not duplicate the developments that were previously sent by postgraduates to the teacher in the framework of previously studied courses).

7.3. Research practice of postgraduates

Research practice is a type of extracurricular work organized for postgraduates in the scientific and pedagogical field. For research practice, the main goal should be to carry out work on the topic of the master's study, the results of which make a significant contribution to the writing of the study. Postgraduates are sent to undergo a research internship in an organization in accordance with the topic of their dissertation research, including at scientific schools of the University. The postgraduate may be offered a research practice by the University, or the postgraduate student may propose an organization of his choice. A postgraduate student fills out a practice diary.

Upon completion of the practice, reports are protected. The recommended report size is 7-10 sheets, Arial font, 14, line spacing - 1. The report contains a description of the types of work and assignments performed by the postgraduate during the practice, a description of the contribution of completed assignments to writing a dissertation research, a description of the supervisor from the practice organization, and a practice diary.

The protection of reports is carried out in a commission consisting of employees of the Office of Practice, Career and Employment, as well as the teaching staff of the Higher School of Law. The score is set by calculating the arithmetic mean of all the ratings of the commission members. The grades are announced to the postgraduates upon completion of hearing the reports of the current day.

Criteria for evaluating the research practice of postgraduates:

- the postgraduate student demonstrates a high degree of study of theoretical materials on the topic of his dissertation research - 25%;
- the postgraduate student demonstrates a sufficient degree of study of practical materials on the topic of dissertation research - 25%;
- the results of the research practice are substantially included in the ongoing research - 25%;
- the report of the postgraduate is logically structured, contains a description of the content of the practice and the results of its passage - 25%.

7.4. Industrial practice of postgraduates

Industrial practice is a type of extracurricular work organized for postgraduates to complete a specialized course. The purpose of the practice is to carry out work relevant to the master's research, which results in a significant contribution to the conduct of empirical research on the research topic. Postgraduates are sent to the organization for practical training in accordance with the topic of the dissertation research. The postgraduate may be offered a practice by the University, or the postgraduate student may propose an organization of his choice.

During the practice, the postgraduate studies the activities of the practice organization, performs the tasks of the head of the practice from the enterprise, gets acquainted with the relevant regulatory framework, works with the materials of the organization on the topic of his dissertation research or close to it. The practice assignments are exclusively applied, practical in nature and form the basis for studying practice in the field under study, as well as aimed at making a significant contribution to the writing of a master's study.

Upon completion of the practice, reports are protected. The recommended report size is 7-10 sheets, Arial font, 14, line spacing - 1. The report contains a description of the types of work and tasks performed by the postgraduate during the practice, a description of the contribution of completed tasks to writing a dissertation research, a description of the head of the practice organization, and a practice diary.

The protection of reports is carried out in a commission consisting of employees of the Office of Practice, Career and Employment, as well as the teaching staff of the Higher School of Law. The score is set by calculating the arithmetic mean of all the ratings of the

commission members. The grades are announced to the undergraduates upon completion of hearing the reports of the current day.

Criteria for evaluating industrial practice:

- the postgraduate student presents the results of completing practice tasks related to the training program - 25%;
- the assignments completed by the postgraduate provide a contribution to the writing of the master's thesis - 25%;
- the postgraduate demonstrates the acquisition of professional practical skills at the end of the internship - 25%;
- the report of the postgraduate is logically structured, contains a description of the content of the practice and the results of its passage - 25%.

Chapter 8

Requirements for the preparation of a master's dissertation (project)

The supervision of the preparation of the master's research is entrusted to the supervisor. The work on the dissertation (project) is carried out in strict accordance with the plan of scientific research. The work on the dissertation (project) is carried out by the postgraduate together with the supervisor in individual consultations.

Responsibilities of the scientific supervisor:

- prepares and issues the assignment for the master's dissertation (project) within the prescribed period, submits for approval the calendar plan for the implementation of the master's dissertation (project);
- recommends to the postgraduate relevant literature, reference and archival materials, standard projects, administrative and judicial decisions, electronic bibliographic resources necessary for the preparation of a master's dissertation (project), and also provides assistance in obtaining them;
- Students on the preparation of master's theses (projects), constantly monitors r postgraduates on the preparation of master's dissertation (projects), constantly monitors the progress of project preparation;
- systematically monitors the results obtained, makes the necessary recommendations and controls the process of making changes and additions to it;
- checks each section of the master's dissertation (project) for illegal borrowing;
- provides postgraduate advice on the design of a master's dissertation (project) in accordance with the requirements of this academic policy, as well as in the process of preparing the project for defense;
- in due time, issues a motivated, detailed review of the master's dissertation (project), containing an indication of the relevance and novelty of the chosen topic, originality, reliability and validity of the results obtained;
- Participates in the defense of a master's dissertation (project) at a meeting of the SAC.

The supervision of the work of scientific supervisors with postgraduates is entrusted to the **Editor of the Research Report**. In case of identification of systematic shortcomings of the head, he (she) may be temporarily or permanently removed from the management of master's dissertations and projects on the basis of a decision of the Science Committee.

The dissertation is carried out in compliance with the principles of independence, internal unity, scientific novelty (for the scientific and pedagogical direction), reliability, practical value and academic honesty.

The principle of independence means that the dissertation is written independently and testifies to the personal contribution of the author of the dissertation to science.

The principle of internal unity means that the dissertation has internal unity, all sections and provisions of the dissertation are logically interrelated; the results and recommendations obtained must correspond to the goals and objectives set in the dissertation.

The principle of scientific novelty means that the scientific results, provisions, recommendations and conclusions of the dissertation are new and the dissertation contains new scientifically based theoretical and (or) experimental results, the totality of which qualifies as a new scientific achievement or is important for the development of specific scientific areas.

The principle of reliability means that the results of the dissertation work were obtained using modern research methods.

The principle of the practical value of a dissertation means that a dissertation with applied significance provides information on the practical use of the scientific results obtained by the author, and a dissertation with theoretical significance provides recommendations on the use of scientific conclusions.

When preparing a master's thesis (project), students are required to comply with the principles of academic integrity. Students are responsible for violating the requirements of this Academic Policy, as well as the Guidelines for Ensuring Academic Integrity and the facts of plagiarism in the process of master's studies. The verification of the independence of the master's dissertation (project) or a separate stage of research is carried out by the supervisor using the Turnitin system. After checking the master's dissertation (project) for illegal borrowing, an official report is generated by the supervisor. The level of originality of the text and citation is determined by the supervisor of the dissertation (project). The fact of plagiarism detection in the master's dissertation (project) is the basis for the postgraduate's non-admission to the defense of the dissertation (project).

The principle of academic integrity means that the author of the dissertation respects the rights and legitimate interests of other authors, the absence of:

-the use and (or) assignment of text, ideas, hypotheses, conclusions, methods, research results, graphs, codes, pictures or works by other authors without reference to the author and the source of borrowing, as well as the use of text by other authors with synonymous substitution of words and expressions without changing the meaning, including the use of text translated from another language (plagiarism);

-the facts of using one's own material, factual and digital data without reference to oneself and (or) to the source of one's own quotations (auto-plagiarism);

-links to non-existent sources, provision of unreliable data and (or) results, records or reports about them (fabrication);

-manipulation of research materials, equipment, images, illustrations or processes, as a result of which the research materials in the dissertation are distorted (falsification).

The coincidence of the names of normative legal acts and official documents, names of state and other official bodies and organizations, terms, definitions and concepts generally accepted for the relevant branch of science, texts of normative legal acts, texts of the studied works is not plagiarism, if the volume and nature of their use do not call into question the independence of the completed dissertation. It is not allowed to use technical means and techniques in order to reduce or exclude the possibility of plagiarism detection.

The Master's dissertation (project) consists of the following parts:

- an explanatory note; ▪
- cover (application 1); ▪
- title page (Application 2); ▪
- calendar plan (Application 3); ▪
- content (Application 4); ▪
- introduction; ▪

- the main part; ▪
- conclusion; ▪
- bibliography; ▪
- applications.

The explanatory note explains the purpose and objectives of the Master's design; determines, reveals the novelty, significance and content of the problem; explains the application of research methods; reflects the main results obtained upon completion of the master's dissertation (project); contribution and scope of inclusion of the research text in the Research Report of the National School of Law. The explanatory note is a separate A4 document (210x297mm). The volume of the explanatory note should not exceed 700 words.

The cover and cover page contain the information specified in Applications 1 and 2. The preparation schedule contains the information specified in the Application 3. The content should include the name of Sections (chapters), Subsections (sub-chapters) and sub-paragraphs of the master's dissertation (project) with an exact indication of the pages on which they are located. Also, each subsection should be accompanied by its own conclusions, at the end of the Section the general conclusion of the chapter is reflected. If in the master's dissertation (project) if uncommon abbreviations, new symbols, designations, etc. are used, then their list can be presented in the draft as a separate list. Such a list should be arranged in a column, in which abbreviations are given on the left (in alphabetical order), and its detailed explanation on the right.

The introduction of the master's dissertation (project) reveals in detail the purpose and objectives of the Master's design; explains the application of research methods in relation to achieving specific results; indicates the contribution and scope of the inclusion of the research text in the Research Report of the National School of Law.

The main part of the master's dissertation (project), which may contain a different number of sections, outlines a brief history of the problem under study; describes interviews conducted by the author, observations, experiments, calculations, results obtained, methods used; analyzes the collected factual material and literature; makes specific conclusions and recommendations for solving the chosen problem. It can contain tables, graphs, and diagrams.

In conclusion, the main theoretical and practical provisions that were achieved as a result of the master's research are indicated; specific recommendations are proposed for solving the problem, the determination of which served as the basis for the preparation of the dissertation (project).

The bibliography contains a list of sources that were used by the author in the process of preparing a master's dissertation (project), even if not directly cited by him. The bibliography is drawn up in accordance with Application 5.

The master's dissertation should be issued in the form of a document in printed and electronic form in A5 format (148x210 mm) and in Microsoft Word format with an extension.doc or .docx. A dissertation submitted in a different format is not allowed to be defended. As a rule, a master's dissertation (scientific and pedagogical direction) should be submitted in the volume of 60 pages of printed text, not including the volume of appendices; a master's project (profile direction) should be submitted in the volume of 40 pages of printed text, not including the volume of appendices. Taking into account the specifics of the chosen topic and the tasks set by the SS, it is allowed to reduce or exceed the volume limit of the master's dissertation.

The dissertation should be completed using a computer and a printer on one side of a sheet of white A4 paper in one interval using the Arial font in black, size 14. The text of the dissertation should be printed observing the following margin sizes: right - 20 mm, top - 20 mm, left - 30 mm and bottom - 20 mm.

It is allowed to use computer capabilities to focus attention on certain terms,

formulas, theorems, using fonts of different typefaces. When performing a dissertation, it is necessary to observe uniform density, contrast and clarity of the image throughout the dissertation. The dissertation should contain clear, indistinct lines, letters, numbers and signs.

The preparation of footnotes in the text of the dissertation should be carried out using the Arial font, size - 10, in one interval, font color - black. Footnotes are arranged in the form of footnotes with end-to-end numbering in accordance with the requirements of the Oxford University Standard for the Citation of Legal Authorities (OSCOLA), 4th edition.

Chapter 9

Requirements for the preparation of the publication

Postgraduates of scientific, pedagogical and specialized fields prepare at least one publication on the topic of the dissertation. The publication is a published research paper in the form of an article that tests the results of a dissertation.

The text of an article by a postgraduate student in a specialized field should be at least 2000 words, not including the amount of information about the authors, abstract (abstract), keywords, list of sources used, footnotes (citations) and appendices.

The text of an article by a postgraduate student of scientific and pedagogical direction should be at least 3,000 words, not including the amount of information about the authors, abstract (abstract), keywords, list of sources used, footnotes (citations) and appendices.

The article can be published in peer-reviewed journals, in collections of scientific and practical conferences and information systems (online publications) in the field of law that adhere to the ethics of scientific research. Before the publication of the article, the postgraduate must submit at least two reviews from the supervisor and a specialist in the field of the research topic. The reviews must be submitted to the Science Committee during the official preliminary defense of the dissertation (project).

The publications of postgraduates are checked by the supervisor for the presence of illegal borrowings before their publication.

Chapter 10

Draft Research and Preliminary defense of the dissertation (project)

Postgraduates of the High School of Law educational programs undergo the defense procedures of the evaluated Research Proposal, Draft Research and the procedure of the official preliminary defense of the dissertation (project) in order to demonstrate to the commission: 1) relevance of the chosen topic; 2) understanding of the chosen topic; 3) and the work done on the research topic. The official preliminary defense is conducted in order to make a decision by the Science Committee of the Higher School of Law on admission or non-admission of a graduate student to public defense.

10.1. Research Proposal and Draft Research

The evaluated Research Proposal and Draft Research are conducted by a commission consisting of the faculty of the Higher School of Law. The assessment for the Research Proposal and Draft Research is equivalent to the examination. In case of receiving an F grade, the postgraduate has the right to retake this type of work in accordance with the established retake procedure.

Types of evaluated Research Proposal and Draft Research:

1. *Research Proposal*. This procedure is an academic work reflecting the relevance and availability of practical and scientific problems of the topic under study. The Research Proposal is prepared and verbally defended before the commission, in accordance with the

requirements set out in Application 9.

2. *Draft Research I*: the report on the implementation of the ERWS . In this procedure, the undergraduate student presents and verbally defends the completed first section of the dissertation (project) before the commission. The document for protection is prepared in accordance with the requirements set out in Application 10.

3. *Draft Research II*: report on the implementation of research and development. In this procedure, the postgraduate submits and orally defends two completed sections of the dissertation before the commission. The document for protection is prepared in accordance with the requirements set out in Application 11.

10.2. Official preliminary protection

The official preliminary defense takes place in the Science Committee of the Higher School of Economics in order to make a decision on admission or non-admission of a postgraduate student to public defense. A postgraduate student with a GPA below 2.0 and academic debt cannot undergo the procedure of official preliminary protection.

The dissertation (draft) must be sent to the Secretary of the Science Committee of the Higher School of Law 10 working days before the start of the official preliminary defense procedure.

Criteria for admission of a dissertation/project to public defense:

- 1) the dissertation/project is completed independently, has a completed form and meets the requirements set out in Chapter 8;
- 2) the conclusions and proposals are reasoned, the author has proposed clear provisions for protection;
- 3) the supervisor applies for admission to public defense, reflecting this in the review;
- 4) the dissertation (project) and the publication are checked by the supervisor for the presence of illegal borrowings.
- 5) The publication meets the requirements set out in Chapter 9.

Chapter 11

Evaluation of the dissertation (project) and public defense

The evaluation of the results of the dissertation (project) is carried out by the State Attestation Commission (SAC). The composition of the SAC is formed based on the profile of the educational program and the topics of the dissertations (projects) proposed for defense. The composition of the SAC is formed from among the teaching staff according to the profile of the educational program and is approved by the decision of the Academic Research Council.

The SAC for the evaluation of dissertations (projects) consists of two parts: 1) evaluation of the dissertation (project); 2) evaluation of the oral defense of the final work. The evaluation of the dissertation (project) consists of: the dissertation (project) itself and an oral presentation, totaling 100%. The weighting factor is distributed as follows: graduation preparation - 60%, oral presentation - 40%.

If the supervisor gives a negative conclusion "not allowed to defend", the dissertation (project) it is not subject to evaluation and protection. A postgraduate student who does not agree with the decision of the supervisor on "not being admitted to the defense" can apply in writing to the Science Committee. The Science Committee gives a reasoned opinion on the application of the undergraduate.

The scientific supervisor of the dissertation (project), who is a member of the SAC, is suspended from evaluating the work.

The final assessment of the SAC for the defense of the dissertation (project) is formed from the assessments: preparation of the final work (60%) and oral defense of the final work (40%).

Dissertations (projects) that have successfully passed the preliminary defense procedure are sent by scientific supervisors to the secretary for evaluation by members three weeks before the start of the work of the SAC. In the process of grading the final work by the members of the SAC, it is recommended to adhere to the quality indicators reflected in Appendix 12.

The checking members and the Chairman of the SAC separately give grades within 100% for each graduate student. The assessment for the dissertation (project) is formed from the arithmetic average of the checking members and the Chairman of the SAC. The assessments of the GAC members are recorded in individual protocols.

If a student requests clarification, the commission must provide a detailed response on the assessment.

The public defense of the master's dissertation (project) is carried out in the presence of:

- positive feedback from the supervisor (Application 6);
- at least one publication that meets the requirements set out in Chapter 9 decisions of the Committee on Science on admission of a postgraduate student to the public defense of a dissertation (project);
- one external review, the qualification (academic or academic degree) of which corresponds to the profile of the work being defended, which provides a comprehensive description of the dissertation (project) and a reasoned conclusion on the possibility of awarding an academic master's degree in the relevant specialty (Application 7). The list of reviewers is approved by the Higher School of Law on the recommendation of the head of the educational program.

The public defense of the master's dissertation (project) is carried out at a meeting of the SAC.

During the public defense, the author of the master's dissertation (project) presents

the purpose, objectives, relevance, novelty and main results of the research for 10 minutes, explains the methodology and the need to apply the results in practice. At the meeting of the SAC, the review of the supervisor is announced directly, the review is announced directly by the reviewer or the secretary of the Commission. During the public defense of the master's dissertation (project), those present can ask questions, and the author can provide explanations, including using computer presentations, diagrams, tables, graphic images and statistical information. The secretary of the SAC voices the review of the external reviewer. The postgraduate is given the opportunity to comment on the main remarks in the review.

The postgraduate student also provides a copy of the dissertation (project) on electronic media for download to the library system "Electronic Catalog". The decision on the successful defense of a master's dissertation (project) is formalized by the minutes of the meeting of the SAC. After completing the defense of master's dissertation (projects) The GAC continues its work in the closed part of the meeting. During a closed meeting, the members of the SAC evaluate the results of the defense of each master's dissertation (project), decide on the award of a master's degree in the relevant specialty. The assessment for the completion and defense of a master's dissertation (project) is an arithmetic mean estimates of the Chairman and each member of the SAC.

In the process of assessment by the members of the GAC, it is recommended to adhere to the quality indicators reflected in Application 13.

An example of the design of a review by a scientific supervisor

FEEDBACK

In the review of the head of the master's dissertation, the following should be noted:

- the relevance of the problem of the master 's dissertation;
- The degree of resolution of a deterministic problem;
- the ability of a graduate student to use special literature and practical materials;
- the degree of validity of the results obtained;
- the possibility of applying the results obtained in practice;
- the ability of a graduate student to practice;
- the possibility of assigning the appropriate qualification to a graduate student.

the postgraduate

REVIEW

The main focus in the review **should be on** the analysis of **each provision** submitted by the undergraduate for defense. The author of the review should strive to analyze the novelty and validity of the provisions submitted for protection, considering their weaknesses and strengths.

The review **may also include**:

- The relevance of the problem of the master's dissertation(project);
- the degree of compliance of the master's dissertation (project) with the stated goal;
- the logic of building a master's dissertation (project); availability of a critical review of literature and practical materials on the problem of the master's dissertation (project), its completeness and consistency of analysis;
- the completeness of the description of the calculation methodology or the research carried out, the presentation of their own calculated, theoretical and experimental results; ▪
- assessment of the reliability of the expressions and data obtained; availability of reasoned conclusions based on the results of the master's dissertation(project); ▪
- the degree of originality of the results obtained;
- the practical significance of the master's dissertation(project), the possibility of applying the results in practice;
- Disadvantages and weaknesses of the Master's dissertation (project); ▪
- comments on the design of the master's dissertation (project) and the style of presentation of the material;
- evaluation of the master's dissertation (project).

REQUIREMENTS FOR THE RESEARCH PROPOSAL (PROTECTION OF THE RELEVANCE OF THE CHOSEN RESEARCH TOPIC)

- 1. AVAILABILITY OF A DISSERTATION RESEARCH PLAN - 20 points** In this section, postgraduates give a brief overview of the Chapter m of the dissertation (what questions are posed in the sections, determine the goals of the sections, what will be studied).

2. PROPER WRITING OF THE INTRODUCTION – 20 points

- Background of the research question
- Formulation of the problem and formulation of the research question
- The purpose of this study and what can the results of this study leads to

3. PROPER LITERATURE REVIEW – 50 points

In this section, postgraduates should show that they are familiar with the research conducted in this field. In particular, undergraduates show: basic theories; research methods; and discussions in this field. The literature review should not become a retelling of other works. Postgraduates need to analyze the work of other authors in the context of the chosen problem. In particular, postgraduates should: identify the main literature; compare several visions for a selected problem; compare opinions; identify shortcomings and/or gaps in an existing problem.

It is expected that in this section, postgraduates will analyze at least 10 textbooks, 20 scientific articles, 10 court cases (to confirm a particular position).

4. AVAILABILITY OF USED LITERATURE – 5 points

It is necessary to list all the sources used.

5. AVAILABILITY OF DEADLINES FOR WRITING A DISSERTATION – 5 points

In this section, postgraduates determine the specific deadlines for writing each section of the dissertation.

REQUIREMENTS FOR DRAFT RESEARCH I

1. TITLE PAGE (5 points)

- Name of the university
- The topic of the dissertation research
- Full name of the graduate student
- Full name of the scientific supervisor

2. DISSERTATION RESEARCH PLAN (5 points)

As a rule, a master's dissertation consists of 2-3 sections.

3. INTRODUCTION (15 POINTS)

- The purpose and objectives of the master 's dissertation
- The novelty of the Master 's research
- Applied research methods
- Literature review (in this block, undergraduates reflect: the main theories and discussions in the field under study; the main literature; comparison of opinions; shortcomings and/or gaps in the field under study)
- This section should consist of at least 500 words

4. COMPLETED THE FIRST SECTION OF THE DISSERTATION (50 points)

- The section should consist of subsections and paragraphs (if necessary)
- This section must consist of at least 2000 words

5. BIBLIOGRAPHY (25 points)

It is necessary to list all the studied literature with an indication of the actually used one, and be ready to reveal the degree of influence of sources on the dissertation research.

For the information of scientific supervisors: scientific supervisors must submit to the "Preliminary defense of the dissertation" a report on illegal borrowing through Turnitin without saving the work in the Turnitin archive.

REQUIREMENTS FOR DRAFT RESEARCH II

1. TITLE PAGE

2. DISSERTATION RESEARCH PLAN

As a rule, a master's dissertation consists of at least 2 sections.

3. INTRODUCTION (20 points)

- The purpose and objectives of the master 's dissertation
- The novelty of the Master 's research •
- Applied research methods (with description and justification) •
- Literature review (in this block, postgraduates reflect: the main theories and discussions in the field under study; the main literature; comparison of opinions; shortcomings and/or gaps in the field under study)
- This section should consist of at least 500 words

4. COMPLETED THE FIRST SECTION OF THE DISSERTATION (30 points)

- The section should consist of subsections and paragraphs (if necessary) •
- This section must consist of at least 2000 words

5. COMPLETED THE SECOND SECTION OF THE DISSERTATION (40 points)

- The section should consist of subsections and paragraphs (if necessary) •
- This section must consist of at least 2000 words

6. BIBLIOGRAPHY (10 points)

It is necessary to list all the studied literature with an indication of the actually used one, and be ready to reveal the degree of influence of sources on the dissertation research.

For the information of scientific supervisors: scientific supervisors must submit to the "Preliminary defense of the dissertation" a report on illegal borrowing through Turnitin without saving the work in the Turnitin archive.

CRITERIA FOR EVALUATING THE PREPARATION OF A DISSERTATION (PROJECT)

No	Criteria	Excellent (90-100)	Good (70-89)	Satisfactory (50-69)	Unsatisfactory (0-49)
1.	Research and knowledge	The postgraduate student showed excellent command of the material and understanding of the subject area. The postgraduate conducted a detailed and thorough study	The postgraduate student showed a good understanding of the subject area. The postgraduate conducted extensive research.	The postgraduate student showed a satisfactory understanding of the subject area. The postgraduate conducted the research within reasonable limits. The student's work may contain minor errors.	The postgraduate showed a superficial assimilation of the material. The postgraduate conducted limited research. The student's work contains serious errors in accuracy.
2.	The quality of the argument	The postgraduate student showed a very high level of relevance, critical thinking and argumentation. The student's work indicates the presence of informed and independent thinking. The postgraduate provides convincing arguments in favor of the conclusions drawn.	The postgraduate student showed relevant and well-focused material. The student's work indicates a high level of critical analysis and independent thinking.	The postgraduate student used relevant material in his work. The work is characterized by a descriptive orientation. The student's work indicates a satisfactory level of critical analysis of the material, and is based on a narrow range of sources.	The work is written vaguely and descriptively. The student's work indicates the presence of a low level or lack of critical analysis.
3.	Structure and consistency	The work structure is excellent. The work demonstrates very clear and consistent reasoning. A strong introduction and conclusion.	The structure of the work is good. The work demonstrates the presence of consistent reasoning. A good introduction and conclusion.	The structure of the work contains some signs of structuring and planning. The work does not demonstrate consistent reasoning.	Structuring and planning needs significant improvement. The work does not demonstrate consistent reasoning.
4.	Presentation, grammar and style	The grammar and presentation of the material are excellent. The work is written in clear and academically acceptable language.	Grammar and style are at a good level.	Grammar and presentation of the material are at a satisfactory level.	Poor presentation and grammar, spelling requires more attention.
5.	References and bibliography	The links are correct and detailed. The bibliography is complete and properly designed.	The links are accurate. The bibliography is mostly complete and well-designed.	The link is generally correct. The bibliography is incomplete and requires some attention.	The links are designed incorrectly. The bibliography is inadequate both in terms of content and accuracy.

CRITERIA FOR EVALUATING THE ORAL DEFENSE OF A DISSERTATION (PROJECT)

№	Criteria	Excellent (90-100)	Good (70-89)	Satisfactory (50-69)	Unsatisfactory (0-49)
1.	The quality of the performance	The postgraduate is fluent in the topic, clearly expresses ideas; maintains contact with the audience.	The postgraduate is fluent in the topic, while admitting inaccuracies, which, nevertheless, do not hinder the understanding of the topic being presented.	The postgraduate is not fluent enough in the topic, has difficulties in presenting the idea. Abuses the use of the slide text.	The postgraduate reads the text, making mistakes.
2.	The correctness of the answer	The answer is correct from the point of view of the most generally accepted, recommended interpretation of the law	The answer is possible with an acceptable broad or restrictive interpretation of the law	The answer is possible with an acceptable broad or restrictive interpretation of the law	An answer that is impossible with an acceptable interpretation of the law
3.	Completeness of the response	Detailed answers to all the questions posed	The lack of a detailed answer to at least one question	Detailed answers to more than half of the questions posed	The lack of detailed answers to more than half of the questions posed
4.	The quality of the argument	Comprehensive justification on each issue with the correct and consistent application of law, doctrine and precedents	Justification for each issue with the correct and consistent application of the rule of law	Some inaccuracies in the application of the rules of law, minor differences in argumentation on various issues	Inaccuracies in the application of legal norms in the answers to more than half of the questions, discrepancies in argumentation, leading to an ambiguous decision
